

1 1. A dental delivery tool sized and configured for delivery of a dental  
2 composition into a dental preparation, comprising:

3 a hollow body configured to deliver a dental composition therefrom, the hollow body  
4 having a proximal receiving end, a distal delivery end, and a passageway communicating  
5 therebetween, the hollow body having a rim distal to the receiving end and a wall extending  
6 between the rim and the receiving end; and

7 a plurality of fibers coupled to at least a portion of the hollow body;  
8 wherein a portion of the fibers extend a length "L" distally beyond the rim of the  
9 hollow body;

10 wherein a portion of the fibers are coupled along the wall a distance "D" proximally  
11 with respect to the rim; and

12 wherein the distance "D" is at least about two and one half times greater than the  
13 length "L".  
14

15 2. A dental delivery tool as recited in claim 1, wherein a least a portion of the  
16 fibers extending the length "L" distally beyond the rim of the hollow body are coupled to the  
17 rim of the hollow body.  
18

19 3. A dental delivery tool as recited in claim 2, wherein at least a portion of the  
20 fibers coupled to the rim extend substantially perpendicularly from a face of the rim.  
21

22 4. A dental delivery tool as recited in claim 1, wherein at least a portion of the  
23 fibers coupled along the wall of the hollow body extend substantially perpendicularly from  
24 the wall.  
25

1           5.    A dental delivery tool as recited in claim 1, wherein the delivery tool  
2 comprises a delivery tip.

3  
4           6.    A dental delivery tool as recited in claim 5, wherein the delivery tip is adapted  
5 for attachment to a syringe.

6  
7           7.    A dental delivery tool as recited in claim 1, wherein the delivery tool  
8 comprises an endodontic irrigator.

9  
10          8.    A dental delivery tool as recited in claim 1, wherein the delivery tool  
11 comprises a dental applicator.

12  
13          9.    A dental delivery tool as recited in claim 1, wherein at least a portion of the  
14 hollow body is curved.

15  
16          10.   A dental delivery tool as recited in claim 1, wherein at least a portion of the  
17 hollow body is rigid.

18  
19          11.   A dental delivery tool as recited in claim 1, wherein the fibers are deposited  
20 onto the hollow body by electrostatic flocking.

21  
22          12.   A dental delivery tool as recited in claim 1, wherein the distance "D" is at  
23 least about three times greater than the length "L".

24  
25          13.   A dental delivery tool as recited in claim 1, wherein the distance "D" is at  
26 least about four times greater than the length "L".

1           14. A dental delivery tool as recited in claim 1, wherein the distance "D" is at  
2 least about five times greater than the length "L".  
3  
4  
5

SALT LAKE CITY, UTAH 84111

1           15. A dental delivery tool sized and configured for delivery of a dental  
2 composition into a dental preparation, comprising:

3           an elongate hollow body configured to deliver a dental composition therefrom, the  
4 hollow body having a proximal receiving end, a distal delivery end and a passageway  
5 communicating therebetween, the hollow body having a rim distal to the receiving end and  
6 a body wall extending between the rim and the receiving end;

7           coupling means for coupling the elongate hollow body to a delivery device; and

8           a plurality of fibers coupled to at least a portion of the hollow body;

9           wherein a portion of the fibers extend a length "L" distally beyond the rim of the  
10 hollow body;

11           wherein a portion of the fibers are coupled along the wall a distance "D" proximally  
12 with respect to the rim; and

13           wherein the distance "D" is at least about two and one half times greater than the  
14 length "L".

15  
16           16. A dental delivery tool as recited in claim 15, wherein at least a portion of the  
17 fibers extending the length "L" distally beyond the rim of the hollow body extend  
18 substantially perpendicularly from a face of the rim.

19  
20           17. A dental delivery tool as recited in claim 15, wherein at least a portion of the  
21 fibers coupled along the wall of the hollow body extend substantially perpendicularly from  
22 the wall.

23  
24           18. A dental delivery tool as recited in claim 15, wherein the coupling means is  
25 adapted for coupling the elongate hollow body to a syringe.

26

1           19. A dental delivery tool as recited in claim 15, wherein the fibers are deposited  
2 onto the hollow body by electrostatic flocking.

3  
4           20. A dental delivery tool as recited in claim 15, wherein the distance "D" is at  
5 least about three times greater than the length "L".

6  
7           21. A dental delivery tool as recited in claim 15, wherein the distance "D" is at  
8 least about four times greater than the length "L".

9  
10          22. A dental delivery tool as recited in claim 15, wherein the distance "D" is at  
11 least about five times greater than the length "L".

1 23. A method for manufacturing a dental delivery tool sized and configured for  
2 delivery of a dental composition to a dental preparation, the method comprising:

3 providing an elongate hollow body configured for delivery of a dental composition  
4 therefrom, the elongate hollow body having a proximal receiving end, a distal delivery end  
5 and a passageway communicating therebetween, the distal delivery end having a rim and a  
6 wall; and

7 coupling a plurality of fibers onto at least a portion of the elongate hollow body in  
8 a manner so that a portion of the fibers extend a length "L" distally beyond the rim of the  
9 hollow body and a portion of the fibers are coupled along the wall a distance "D" proximally  
10 with respect to the rim,

11 wherein the distance "D" is at least about two and one half times greater than the  
12 length "L".  
13

14 24. A method as recited in claim 23, wherein the fibers are deposited onto the  
15 cannula through electrostatic flocking.  
16

17 25. A dental delivery tool as recited in claim 23, wherein the distance "D" is at  
18 least about three times greater than the length "L".  
19

20 26. A dental delivery tool as recited in claim 23, wherein the distance "D" is at  
21 least about four times greater than the length "L".  
22

23 27. A dental delivery tool as recited in claim 23, wherein the distance "D" is at  
24 least about five times greater than the length "L".  
25
